COTTON INDUSTRY OF INDIA

-  Cotton plays a major role in the Indian economy as cotton dominates the country's textile industry.
-  India is one of the largest producers, manufacturers as well as exporters of cotton yarn and the Indian textile industry contributes about 11 percent to industrial production, 14 percent to the manufacturing sector, 4 percent to the GDP, and 12 percent to the country's total export earnings.
-  The states of Gujarat, Maharashtra, Andhra Pradesh (AP), Haryana, Punjab, Madhya Pradesh (MP), Rajasthan, Karnataka, and Tamil Nadu (TN) are the major cotton producers in India.
-  Various reputed foreign retailers and brands such as Carrefour, Gap, H&M, JC Penney, Levi Strauss, Macy's, Marks & Spencer, Metro Group, Nike, Reebok, Tommy Hilfiger and Wal-Mart import Indian textile products.

ORGANIC COTTON – BCI – PSCP (PRIMARK)

Organic cotton is cotton that is grown without insecticide/ pesticide from plants, which are not genetically modified. Cotton is the most pesticide dependent crop in the world, accounting for 25% of the world's pesticides. According to world Health Organization (WHO), 20,000 death occur each year from pesticide poisoning in developing countries, many of these from cotton farming.

We are also dealing in Organic Raw Cotton BCI ,PSCP. We have direct registration with ECOCERT, S A & Control Union (Formerly SKAL) BCI, PRIMARK We also supply organic cotton from Onecert, Indocert and other organic Certification bodies.

We deal in all major Varieties of Organic Cotton BCI ,PSCP. such as Shanker-6(1-1/8 - 28.5-29MM) / Bunny (29-30MM) / MCU-5(J-34 , DCH-32). We have strong procuring network for Organic Cotton in Various States such as Gujrat, Maharshttra, Orissa etc. We have supplied around 3000 MTs of Organic Cotton BCI ,PSCP. to various Markets such as Bangladesh , Pakistan,Indonesia,China etc under the certification through Ecocert SA & Control Union (SKAL).BCI,PRIMARK

QUALITY

As our Punch Line suggests we don't just maintain the highest possible quality but we never leave a stone unturned to surpass the standards of quality set by different reputed organizations- we try to redefine quality itself.

Being in this business from a long time has taught us that to keep our words is one of the inevitable parameter for guaranteed success.

We use different ways and means to follow our promise of highest possible quality.

We sent the test results of our goods checked by a government approved laboratory before dispatch, the consignment starts its journey only if the results are approved by the buyer.

We have our own warehouse where we have appropriate fumigation facility and every necessary

At warehouse we have employees who are being given proper training at regular intervals to keep the business going on smoothly.

We send weighment and packing details by photographs at every possible steps.

We understand that a buyer don't just want us to send the goods but he/she wants that goods to be delivered the way it should be, for this we have proper trained human resource who keep watch and also pass the information of the consignment at every step to the buyer.

OVERVIEW OF THE COTTON MARKET

India's association with cotton goes back a long way. Cotton was first cultivated nearly 7,000 years ago, by the inhabitants of indus valley civilization – part of northwestern india today. The magic of this textile fiber then spread from india to the mediterranean and beyond.

Over the last few decades india has made rapid strides in the production, ginning and export of cotton.

Since the commencement of the "technology mission on cotton" by the government of india in february 2000, significant achievements have been made in several spheres of the cotton industry. An increase in yield and production, through the adoption of high-yield bt cotton hybrids, were some of the factors that contributed to an increase in yield per hectare. From 300 kg/ha, the number increased substantially and reached a level of 554 kg/ha in 2007-08.

Indian cotton is a major contributor for the indian economy and the global cotton trade. As per the data compiled in 2022, india is the 2nd largest producer, exporter and consumer of cotton in the world, producing 21.83% of the world's cotton. In addition, india is also the largest producer of organic cotton. Cotton textiles account for almost 29% of total t&c export from india. Over the last decade the indian cotton industry has seen several positive changes, beginning with the area of production for cotton cultivation. The area that was once recorded at 119.10 million hectares, has at present has increased to 125.10 million hectares (indian cotton annual, 2022-23).

There has further been a marked improvement in the length, strength, contamination levels and overall quality of indian cotton, with the crop size increasing by upto a 100% over the last decade.

Government schemes, initiated to assist ginners, have resulted in a significant improvement in the availability of ginning facilities in the country and encouraged new ginners to be a part of this flourishing industry. The last seven-eight years have seen reduced crop contamination levels and today, a majority of trade centers in south east asia thrive on indian cotton. These are just some of key factors that have played a considerable role in the increased value and acceptability of indian cotton on a global scale.

TRANSPORTATION

cotton from market yard to ginning plant transported in plastic covered truck to protect it from the rain and dust.

FOR COTTON QUALITY

We keep factory premises clean, provide rubbish bins and spittoons at different places. Heap of Seed cotton on clean, paved platforms or in well ventilated, covered godowns. Engage extra labours to remove contaminants while forming Seed cotton heaps.

Dry moist Seed cotton in the sun to limit moisture content to within 7-10 percent.

Provide all workers with white cotton clothing to wear and caps to cover their heads so that hair may not contaminate the cotton.

FOR AVOID CONTAMINATION

Handle all materials such as seed cotton, seed and lint with care to avoid mixing with foreign matter. Use grease instead of oil in gear boxes to prevent contamination with oil. Maintain proper overlap setting and ensure periodical grooving of leather roller to avoid seed cut and fibre breakage. Remove metal wires, bolts, machine parts, leather pieces, spilt oil etc. to prevent their entry into seed cotton/lint. Before feeding to baling press once again ensure that no extraneous matter gets in to the lint.

STORAGE

To store cotton bales in a covered godown to prevent their exposure to wind, rain, dust etc.

DISPOSAL OF TRASH

Arrangement is made for regular disposal of trash as soon as accumulates. This is necessary to prevent the mixing of trash with seed cotton/lint.

PACKING

Bale is Covered on all sides, preferably with cotton cloth and in a manner specified in BIS Standard and export packing.

WE USE NEW PLASTIC STRAPS

Use quick drying good quality ink to print specification on bale cover printed label.

OUR EXTRA CARE

Quality Awareness Boards/Displays at various places to instill quality culture among workers In the compound In the Gin House.
